

Feature	BASIC	FLEET (250@1st)	PRO (No Limit)	Description
Users	1	unlimited	unlimited	The account owner, or administrator, can create sub accounts and control which assets they have access to, permission levels, etc. This is only available for Pro accounts.
GPS Tracking	yes	yes	yes	Access and store tracking information about your assets, including reporting, alerting, and management
SOS alerts to Email	yes	yes	yes	Forward SOS alerts to any contacts defined as "Emergency Contacts" in your portal
SOS alerts to Portal	yes	yes	yes	Popup a red notification window the the asset name, ID, and location for any connected portal users
Text Message from Portal	yes	yes	yes	Easily send a free form text message from the web portal to your device
Canned Messages	yes	yes	yes	Setup predefined text messages and synchronize them remotely with your device
Email to SBD Gateway	yes	yes	yes	You can send a free form text message to the end device by sending an email to {IMEI}@gsattrack.com
Number of Assets	1	unlimited	unlimited	Pro accounts are allowed to manage all of their assets in one interface, whereas Basic accounts can utilize one asset per account/login.
Geofencing	no	yes	yes	Geofencing defines geographical zones which can trigger alarms via email, text, or portal notifications. We support 3 types of geofences, including circles, polygons, and lines.
User Access Control	no	yes	yes	User permissions control which assets a user can view, modify, and/or alter. For example, if you have 100 devices, you can assign ten different devices to 10 different users and they cannot view each others assets, whereas the Administrator of the account can view all 100 assets.
Inter-Device Messaging	no	yes	yes	Devices that support messaging, are assigned a "Message Routing ID" which you can then address from any device in your network. For example, Device #1 (ID 11) can send a message to Device #2 (ID 22) by sending a text message "22:Hello Device #2." The ID on the front of the text message tells our network to route the message to Device #2.
Multiple Hardware Types	no	yes	yes	The platform supports more than 40 hardware devices, and will aggregate them all together into one interface that is simple to use. Messaging between devices will automatically be translated into the right network and format as well.
Encryption	no	no	yes	Support for encrypted inbound and outbound communications including AES and OpenPGP.
Garmin Integration	no	no	yes	Use Garmin screens to communicate with the tracking platform for driver monitoring, routing, and text messaging.
